Subject: Endorsement of an Independent Humanitarian Satellite Mission

To Whom It May Concern,

On behalf of GRID3, we are pleased to express our support for an independent, high resolution satellite humanitarian mission. We believe that such an initiative has the potential to transform crisis response, early warning systems, and humanitarian aid by leveraging Earth observation technology to deliver timely, open data to those who need it most.

The ability to monitor climate-related disasters, forced displacement, food security, and human rights violations from space offers an unprecedented opportunity to improve the effectiveness and efficiency of humanitarian efforts worldwide. With rapid advancements in satellite capabilities and geospatial analytics, now is the time to explore how a dedicated humanitarian satellite can bridge critical data gaps and provide equitable access to life-saving information.

As an organization committed to generating, validating, and using core spatial datasets on population, settlements, subnational boundaries, and crucial infrastructure for improving delivery of health services, we recognize the urgent need for reliable, real-time geospatial data in decision-making processes to address humanity's greatest challenges. We look forward to engaging with this effort and contributing our expertise where possible. We urge other stakeholders to support this initiative and explore collaborative opportunities to bring this vision to life.

Please do not hesitate to contact us for further discussions on how we can contribute to this important effort.

Sincerely,

A handwritten signature in black ink that reads "Marc Levy" with a long, sweeping underline.
